EXECUTIVE SUMMARY

eons LLC is an artificial general intelligence (AGI) company focused on vertical integration of cloud technologies.

eons is owned by Séon with the support of Rob and Sam. We're talented scientists, designers, and programmers but lack investment funds. We offer 3 kinds of products:

1. Code products provided open source and free to use.
2. Hosted cloud services priced to the service and usage.
3. Custom development and consulting charged hourly.

We have a consistent and growing client base. However, company revenue is less than expenses and is provided almost entirely by our Web Infrastructure website development and hosting platform.

eons is pre-seed and seeking to raise $350,000 for development of our data analytics products: Develop Biology and Constellatus.

ABOUT

eons LLC was incorporated at the request of our clients but has been a goal of ours for many years. If successful, this company will provide humanity with the tools necessary to achieve immortality. If we fail, we still intend to leave this world better than we found it. In light of these aspirations, the "holy grail" that is artificial general intelligence is but a first step on our journey.

Our small team and global infrastructure have proven both agile and robust, meeting the needs of new clients while maintaining the great service expected of us. We stay ahead of popular technologies by building automation into every level of our work and stacking our products so that they feed back onto each other to create strong foundations.

People want to use eons LLC because we offer better services at lower prices than most competitors. People stay with us because we're good at what we do and our tech works.

All work done by eons is carried out remotely. eons does not maintain a physical location for business; however, physical mail can be sent to 10580 N. McCarran Blvd. Ste 115 #221 Reno, NV 89503.

COMPANY STRUCTURE

eons LLC is a Limited Liability Company and Sole Proprietorship owned and operated by Séon O'Shannon.

eons LLC is currently **pre-seed**.

TEAM

The eons team has experience in:

- Chemistry & Biochemistry
- Studio Art Software, Cloud
- Technologies, & IT
- Business & Leadership
- Customer relations

We are do-ers and leaders good at making things happen.

What we lack is financial support; we've just been bootstrapping ourselves as best we can.

2.0%SamStollerman:2.0 %SamStollerman:2.0

% The company will continue to be run by Séon until it becomes too large to be run by a single
individual. At that point, the company will be reincorporated as a C Corporation and a board of
directors will be formed from existing business partners. This reincorporation will be followed by
an initial public offering (IPO) to raise capital and expand the company further. We're likely
looking at an exit after a series B.

PRODUCTS

So far, we offer:

- Devops tools like ebbs (open source) and Infrastructure (hosted service).
- Website development & hosting through Web Infrastructure.

We are currently working on:

- Mood Recorder, an emotional health and wellness app.
- Our AGI flagship project: Develop Biology.

We are partnering with other companies to build out:

- Manufacturing connections.
- IoT systems to host our AGI software.
- Automated food production.

At this time, eons LLC primarily generates revenue through the website development and custom software industries.

Here's our full product roadmap. We keep this updated.

MARKET

The markets targeted by eons LLC are relatively saturated. For example, there is an abundance of web hosting companies and web development agencies. However, there is also an abundance of work available. Unfortunately, our competitors generally fail in one or more of the following ways:

1. New technologies are not fully taken advantage of, leading to overpriced or outdated products.
2. The product offered is underdeveloped or unstable, leaving users with a broken or only partially working service.
3. How to use a product is not clear and help is inadequate, leaving users dissatisfied or forced to buy a different service.
4. The product rests entirely on another company, adding little value and a large markup in price.

Simply knowing which companies and products fail in the above ways has allowed us to offer beneficial consultation to its existing clients, saving them time, money, and quite a bit of frustration. The products we offer avoid the above pitfalls through 3 simple mechanisms:

1. Abundant fail-safes, ensuring a secure and operational service.
2. Automatic updates, ensuring software never goes out of date or becomes insecure.
3. Tight developer to client relationships, ensuring that clients always have the best support and that new products directly address client needs.

Currently, the ideal clients for eons LLC are those who sit between

either:

1. Scientific research and public knowledge.
2. Public knowledge and technology development.

In the first case, we can help by providing a framework for publishing research and making ideas more digestible. In the second case, we can help by directly developing or providing consulting and assistance to groups working on new technologies. Ideally, these two client bases will converge around eons, creating a feedback loop that leads to many first-to-market innovations.

Looking to the future, eons LLC is taking on some of the largest companies in the world through AGI and cloud technologies. It is our intent not to meet these companies head on, but rather, provide affordable and customtailored data solutions to our clients. Besides, all our tech is open source, and since AGI will touch every imaginable industry, there will be plenty of market share available to all. We want our technological independence and to make sure the market stays fair.

EXISTING CLIENTS

eons LLC continues to be a key part in the function and growth of these organizations:

- AOE Greens
- Neural Workshop
- Great Basin Fire Science Exchange (through the University of Nevada, Reno)
- Great Plains Fire Science Exchange
- Great Basin Native Plant Project
- Turtle Moon Qigong A few smaller organizations and political campaigns also rely on Web

Infrastructure and our other products.

FINANCIALS

Here, we provide an updated overview of our income and expenditures. To protect the privacy of our clients, only amounts in and out are shown and all sources of income are hidden. Currently, eons LLC is operating at a deficit and is primarily financed by Séon's credit cards.
